3. An image forming apparatus according to claim 1, wherein said image forming section is capable of sequentially executing a plurality of jobs, and each job is associated with one of said plurality of operational modes.

4. An image forming apparatus according to claim 1,
further comprising:

an image reading section for reading an image of
5 a document and creating image data; and
a data receiving section for receiving image data,
wherein said plurality of operational modes
include a copying operation in which an image is formed
based on the image data created by said image reading
10 section and a printing operation in which an image is
formed based on the image data received by said data
receiving section.

5. A image forming apparatus according to claim 4,
15 further comprising:

a facsimile control section for sending and
receiving image data through communication lines,

wherein said plurality of operational modes
include a facsimile operation which is executed by using
20 said facsimile control section.

6. A image forming apparatus according to claim 1,
wherein said control means sets a background color of said
display device according to the color information.

program registration means for registering a plurality of combinations of image-forming conditions; and setting means for setting an operational mode by calling a combination of image-forming conditions registered by said program registration means.

10. A image forming apparatus according to claim 1,
further comprising:

first setting means for setting an image-forming
condition regarding a first function, and

5 second setting means for setting an image-forming
condition regarding a second function in association with
said image-forming condition set by said first setting
means.

10 11. A image forming apparatus according to claim 10,
wherein the image-forming condition regarding said first
function and the image-forming condition regarding said
second function are simultaneously displayed in
sectionalized regions of a screen of said display device,
15 and said regions are displayed in different colors.

12. A image forming apparatus according to claim 10,
wherein a background color of each of said regions is set
according to the color information.

13. An image forming apparatus comprising:

an image forming section for forming an image in
a plurality of operational modes;

a display device for performing display in a
25 plurality of display modes;
